

# ALL ABOUT MAINTAINING YOUR TANKLESS WATER HEATER

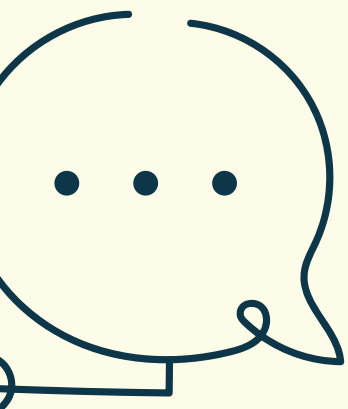

## SCREEN FILTER CLEANING

- The in-line screen filter in your tankless water heater must be cleaned to remove any accumulated debris and ensure long time reliability.

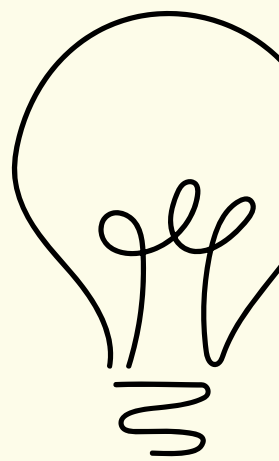

## FLUSHING

- The heat exchanger on your water heater can get blocked by limescale over time.
- If not flushed, not enough water can pass through to cool down the heat exchanger resulting in potential damage.

## LIMESCALE REMOVAL

- Tankless water heaters accumulate minerals overtime, thus the unit should be flushed typically at least once a year to ensure proper operation.

If you experience any of these problems or have any questions, get in touch with Taunton Trades today.
