1

SOLAR BLANKET

Solar blankets are a low cost solution to heating your pool. They use the sun to trap heat, therefore, heating up your pool!

2

SOLAR WATER HEATER

Solar water heaters are eco-friendly and energy efficient! The solar water heater system is left in the sun, thus absorbing the heat. Then, as water passes through the system, it is heated.

3

WINDPROOF POOL CLOSURE

Windproof pool closures are safety barriers that are attached to your pool to keep the wind out. They are great to use if you live in a windy area, or a place with lots of rain!

4

ELECTRIC HEAT PUMP

Electric heat pumps are suggested if you don't have access to natural gas or don't want propane as an option. Also, if your building has any property line setbacks, heat pumps are great because they don't have as many requirements as gas or propane pool heaters do. Heat pumps can be costly since they use electricity, but they are very easy to use!

5

GAS POOL HEATER

Gas pool heaters are a great choice if you want to heat your pool quickly. A gas pool heater will require you to have underground gas lines which can take a while to install, but once installed, this system will ensure that your pool season lasts longer!
