

HVAC FALL MAINTENANCE FOR COMFORT & EFFICIENCY

Fall is a great time to prepare your heating system for the colder months ahead. Regular maintenance can ensure that your HVAC system runs efficiently and provides a comfortable living environment for you and your family.

CHANGE YOUR AIR FILTERS

Dirty or clogged air filters can cause your heating system to work harder than necessary, resulting in higher energy bills and reduced efficiency. Typically, filters should be changed every one to three months, depending on usage and the type of filter.

CLEAN YOUR DUCTWORK

Dust, debris, and other contaminants can accumulate in your ducts over time, forcing your HVAC system to work harder. Professional duct cleaning can help remove these contaminants and improve indoor air quality.

CONSIDER UPGRADING TO A SMART THERMOSTAT

A programmable thermostat can help you save money on your energy bills and improve the efficiency of your heating system. These devices allow you to adjust temperatures at different times of the day, so you can reduce energy usage when you're not at home, or asleep.

SCHEDULE A PROFESSIONAL MAINTENANCE CHECK

It's a good idea to have your heating system inspected by a professional HVAC technician. Fall is the perfect time to schedule a maintenance check, as it allows you to identify any potential issues before the cold weather arrives.
