

# 5 KEY FACTORS WHEN BUYING A FURNACE

*A furnace is a crucial component of any heating system in a home or commercial building. When purchasing a new furnace, there are several factors to consider to ensure that you choose the right one.*

## SIZE

It is essential to choose the right size of the furnace for your home or building. A furnace that is too small will not adequately heat the space, while one that is too large will waste energy and money. Consider the size of your home or building, the number of rooms, and the insulation to determine the appropriate size.

## TYPE OF FUEL

Furnaces can run on different types of fuel, including natural gas, propane, oil, and electricity. Consider the availability and cost of the fuel in your area before choosing a furnace.

## ENERGY EFFICIENCY

Look for furnaces with a high Annual Fuel Utilization Efficiency (AFUE) rating, which indicates how efficiently the furnace converts fuel into heat. The higher the AFUE rating, the more energy-efficient the furnace.

## NOISE

Different furnaces produce different levels of noise. If you are sensitive to noise, consider purchasing a furnace with a lower decibel rating or one that is designed to be quieter.

## BRAND AND WARRANTY

Choose a reputable brand with a good warranty to ensure that you are getting a quality product. Look for warranties that cover both parts and labour for a reasonable period, such as 5-10 years.
