

WINTERIZE YOUR HOME AND REDUCE ENERGY BILLS

5 TIPS TO IMPROVE THE ENERGY EFFICIENCY OF YOUR HOME AND SLASH ENERGY BILLS

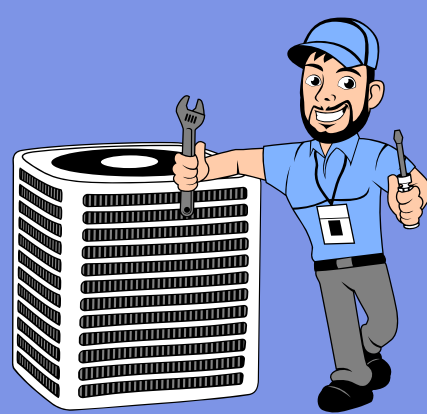

Insulate Your Home

Proper insulation is essential to keep your home warm and reduce heat loss. Make sure your walls, attic, and floors are properly insulated. You can also add weather-stripping to your doors and windows to prevent drafts.

Maintain Your Heating System

Regular maintenance of your heating system can improve its efficiency and save you money on energy bills. Have a professional check your furnace or boiler every year to ensure it is running smoothly and efficiently.

Use A Programmable Thermostat

A programmable thermostat can help you save energy by automatically adjusting the temperature in your home when you are away or asleep. Set the thermostat to turn down the heat when you are not at home or when you are sleeping to save on energy costs.

Use Energy Efficient Lighting

Replace your traditional incandescent light bulbs with energy-efficient LED bulbs. They use less energy and last longer, which can save you money on your energy bills.

Seal Air Leaks

Air leaks in your home can waste a lot of energy and cause drafts. Use caulking or weather-stripping to seal any gaps or cracks in your windows, doors, and walls.
